TASK ONE (5 marks)

Read the instructions carefully and write a forum contribution of 60-70 words.

Your English teacher has asked each student to write a forum contribution about how microplastics affect our health. You found the following information on the Internet. Write a contribution to the forum on the language school website **summarizing** the text in your own words.

Plastic intake

Research has found that microplastics (plastic particles measuring less than 5mm) can accumulate in the gastrointestinal tract and cause inflammation, leading to possible cellular damage. Additionally, microplastics have been found to contain harmful chemicals such as bisphenol A and polychlorinated biphenyls, which can leach into the body and are linked to health issues such as cancer, birth defects, and neurological damage.

Recent studies have shown that microplastics have been found in various species of fish and shellfish, which are commonly consumed by humans. This means that people who consume seafood may be at a higher risk of indirect plastic intake.

The impact of indirect plastic intake on human health is a growing concern and further research is needed to fully understand the extent of the risks and potential health effects. It is clear thought that reducing plastic consumption and properly disposing of plastic waste can help to mitigate these risks.

MEDIACIÓN LINGÜÍSTICA

TAREA 1: MEDIACIÓN ESCRITA

MODELO DE ACTUACIÓN

Hey,

Recall my remarks on how pollutants impact our health? According to an article I stumbled upon, microplastics harbor toxic chemicals and trigger inflammation in the digestive system, causing cancer and fetal abnormalities. Microplastics are present in seafood, making them dangerous. Further investigation is required to assess the scope of these hazards. Reducing plastic and disposing of it correctly can assist in reducing the risks.

Hope this helps!
