## PASSENGER DRONES

The dream of the flying car could come down to earth before it gets off the ground. Rising in its place: a network of self-flying drones big enough to ferry individual commuters around town. That's the future envisioned by several start-ups that are developing so-called "passenger drones," which could shrink commute times from hours to minutes.

Passenger drones, by contrast, would operate autonomously and leave the "roadable" part behind in favor of larger versions of aircraft that already exist. Chinese startup EHang last month announced it would debut its passenger drone service in Dubai soon.
